(54) SPECTACLE FRAME WITH LIGHT EMITTING FUNCTION

(57)Abstract:

PURPOSE: To announce various kinds of information to a spectacle user by providing a light emitting part to the peripheral part of a lens and allowing the light emitting part to emit light inward at prescribed timing via controlling part.

CONSTITUTION: The light emitting part 3, such as light emitting diode, is provided in the lens peripheral part 1a of a body 1 of the spectacle frame and a light emission control part 4 is built in a temple part 1b. The light of the light emitting part 3 is adjusted to about the light which is emitted inward of the lens 2 and applies a light stimulus to the person wearing the spectacles. A timer provided in the control part 4 in this constitution is set and the light emitting part is made to emit light at every, for example, 50 minutes to announce the periodic working time. Provision of the periodic rest time or various other kinds of information to the user is thus possible.
